Summary

A Data Engineer with 5 years building Azure data platforms across finance and healthcare domains. Designed medallion lakehouses (ADF, Databricks) and built reliable ETL/ELT pipelines with dbt tests and CI/CD quality gates. Automated 10+ hours of weekly reconciliation and maintained 100% SLA compliance across 22 portfolio applications at Hexaware.

Professional Experience

Data and System Analytics Associate (Part-Time)

12/2025 – 05/2026

Universitätsklinikum Heidelberg, Heidelberg, Germany

- Reduced manual reporting effort by 20% by building Python REST API ingestion pipelines between qTest and Matrix42 and delivering a unified weekly reporting layer for incident, service request and test execution data.
- Designed end-to-end ADF pipelines with parameterised triggers and incremental loads into ADLS to enable scheduled SLA breach monitoring for IT service workflows.
- Increased production reliability by implementing dbt staging and mart models with automated tests and GitHub Actions CI/CD gates that run dbt tests and SQL checks before deployment.

Senior Software Engineer

03/2019 – 10/2023

Hexaware Technologies Pvt. Ltd., Navi Mumbai, India

- Led a team of six data engineers delivering Azure pipeline and reporting solutions across 22 US financial portfolio applications and owned sprint execution from planning to releases.
- Maintained 100% SLA compliance by implementing ADF incremental loading with failure alerting and automated retries and coordinating with DevOps on deployment and monitoring.
- Saved almost 4 hours of weekly reconciliation by replacing Excel based AUM and performance reporting with automated Python and SQL pipelines and a Parquet based medallion architecture on ADLS.

Projects

Smart Energy Forecasting Pipeline, Master's Thesis

04/2025 – 09/2025

SRH Hochschule Heidelberg, Heidelberg, Germany

- Built an end-to-end ADLS pipeline using Bronze, Silver and Gold medallion layers for electricity, solar, weather and cost datasets.
- Developed dbt models and automated tests and produced a Power BI dataset and dashboard inputs for building level energy analysis and forecasting which identified 12% potential energy savings.

DB Train Delay and Route Reliability Pipeline

05/2026 – 06/2026

Personal Project - GitHub

- Engineered a local lakehouse pipeline for German train delay analytics, using API ingestion to land raw timetable events as JSON into a Bronze layer, persisted as Parquet and applied PySpark transformations to standardize semi-structured records across 6 route categories.
- Built a Medallion-style dbt transformation layer with CI quality gates and freshness thresholds (36h warn / 72h fail) to ensure curated Silver/Gold outputs and computed 11+ KPIs for Streamlit dashboards.

Education

M.Sc. Applied Data Science and Analytics

10/2023 – 09/2025

SRH Hochschule Heidelberg, Heidelberg, Germany

Technical Skills

Programming & Querying: Python, SQL, REST APIs

Data Engineering & Cloud: Azure Data Factory, Azure Data Lake Storage, Azure SQL, ETL/ELT pipelines

Spark & Lakehouse: Databricks, PySpark, Delta Lake, Parquet, medallion architecture

Data Modelling & Transformation: dbt, star schema, fact and dimension modelling, reporting marts

BI & Tools: Power BI, DAX, Power Query, Git, GitHub Actions, Docker

Languages

English: C1 (Professional working proficiency) | **German:** B1 (actively improving, B2 target)

Certificates

Microsoft Azure Fundamentals (AZ-900) | **Databricks for Data Engineering** | **NVIDIA Deep Learning Fundamentals**
